# Nitric Oxide: Biology and Pathobiology

Louis J. Ignarro

Nitric oxide (NO) is a gas that transmits signals in an organism. Signal transmission through a gas that's produced through one molecule and which penetrates via membranes and regulates the functionality of one other molecule represents a wholly new precept for signaling in organic systems. NO is a signal molecule of key significance for the cardiovascular process performing as a regulator of blood strain and as a gatekeeper of blood stream to varied organs. NO additionally exerts a sequence of alternative functions, comparable to performing a signal molecule within the nervous approach and as a weapon opposed to infections. NO is found in such a lot residing creatures and made through many differing kinds of cells. NO research has resulted in new remedies for treating cancer in addition to lung diseases, shock, and impotence. Scientists are presently trying out no matter if NO can be utilized to prevent the expansion of cancerous tumors, because the gas can set off programmed cell death, apoptosis. This e-book is the 1st entire textual content on nitric oxide to date.
